Customers Notes 01/03/2024.

ENSE871: Usability Engineering

There are some important notes between customer conversation and team members:

1. Professor Tim finds website pages good. He suggested us to develop more pages for the next client meeting.

2. Our website current theme is not impressive. We should work more on our theme so user want to spend more time and want to stay more on the website exploring contents.

3. We should change name "Explore more Community" to something else. Cause SIG being a community, new users may be got confused with having multiple communities under SIG.

4. We should explore more Wordpress plugins. Plugins may help us to manage dynamic data more conveniently.

5. As our clients first most need is connection between people and researchers, we should start thinking to develop those pages first rather then begin focused on developing event or about us pages.
